

Laser Technology Service

Advanced Lasertec LTD wants to provide you with an overview of its service.

We work with a Trumpf CO2 Laser. The TLC 1500 laser utilizes a CW-wattage of 1500W. The system is designed for laser welding jobs. Welding depths of up to 4mm are feasible. Due to the flexibility of the system even the most difficult 3-dimensional geometry is no problem to realize since the machine allows strokes of 400x600x240mm and an angle of 180°. The CNC-controlled laser beam guarantees accurate repeatability.

We are used to solving demanding and sophisticated tasks on a daily base. We provide you with competent contact persons, experienced machine operators and of course the latest technology.

Prototyping

“Is there a solution to your production task?”

“Does the use of laser technology pay off?”

We want to provide you with the right answers to your questions with the help of prototypes.

Job shop

Regardless whether it is an individual item or full production that you want, with our latest laser technology we can meet your specific requirements.

Consultation

We inform you competently about the possibilities of laser processing and support you with the selection of the appropriate method.

Quality

It goes without saying that our quality planning, quality assurance and quality control according to the recognized quality standards is just as critical to us as quick and reliable processing of an order.

We are looking forward to the challenge of solving your individual task. You will certainly be satisfied with our performance.
